

CITY OF RANCHO PALOS VERDES
PUBLIC WORKS DEPARTMENT

September 1, 2010

Dear Resident:

As you are aware, the City has begun the process of resurfacing the streets in your neighborhood. Enclosed is a map of the streets to be resurfaced as well as a table indicating the dates that work will commence.

For most streets, the resurfacing work is comprised of a two-step process. The first step, the Chip Seal application, will occur on Thursday, September 2nd. The second part of the process, the Slurry Seal application, will be performed the following week (after the Labor Day holiday). See the attached maps and tables that indicate when your street will be chip sealed and slurry sealed, respectively. Please note when referring to the maps and tables that some streets may only require the slurry seal and not the chip seal process. The following applies to all resurfacing work:

- On-street parking will not be permitted between the hours of 7am and 5pm on the day the street is scheduled for Chip Seal and the day it is scheduled for Slurry Seal.
- During the Chip Seal application, the road will not be closed to driving, and only minor delays should be expected, since it can be driven upon almost immediately after it is applied.
- During the Slurry Seal application, you may not drive on the slurry sealed street between the hours of 7am and 5pm. Therefore, on the day your street is scheduled to be slurry sealed (or the night before if you are leaving after 7am in the morning), it is recommended that you park your vehicle on a nearby street that will not be slurry sealed that day, even if you normally park in your garage or driveway. The scheduling of the work on each street is created so that parking will be available on a street within a reasonable distance from your residence.
- For the first week after the chip seal and slurry seal has been applied to the street, please take care when driving on it – especially when braking and turning the wheels. Quickly accelerating, decelerating, or turning the wheels while stationary, can cause rutting in the new pavement surface.

There will be a City representative on site at all time to answer questions you may have on a daily basis. Otherwise, feel free to contact us at City Hall at 310-544-5252 or visit the City's website for additional information www.palosverdes.com/rpv/publicworks/Residential-Rehab-Project/index.cfm

Sincerely,

Nicole Jules, P.E.
Senior Engineer
